DOMENICO SPOTO

Data Scientist

domenico.spoto18@gmail.com – linkedin.com/in/domenico-spoto – github.com/mimmospoto – +39-3472143549

ABOUT ME

Data Scientist with 3+ years of experience building supervised and unsupervised machine learning models in high-noise, high-stakes domains: fraud and anomaly detection at Poste Italiane and credit risk scoring at doValue. Skilled in Python (pandas, scikit-learn, PyTorch, MLflow) and PySpark, with a focus on prototyping quickly, evaluating models on metrics that reflect business cost (precision/recall, false positives), and working with product and engineering to move proofs of concept toward production. Motivated by early-stage teams where I can bring structure to messy problems.

EMPLOYMENT

doValue **04/2025 – Present**
Data Scientist Rome, Italy

- Build predictive statistical and machine learning models — including Probability of Default (PD) and Propensity-to-Pay (PTP) models — sourcing and integrating novel financial and alternative datasets to strengthen model signal quality.
- Engineer and maintain automated data ingestion pipelines, sourcing and integrating novel financial and alternative datasets to enhance model predictive power.
- Perform rigorous data wrangling — extraction, parsing, cleaning and feature engineering — transforming raw financial data into model-ready datasets at scale.
- Drive the full lifecycle of credit scoring innovation, from research and PoC development through to production-grade data products, bridging data science and business outcomes.

Poste Italiane **05/2023 – 04/2025**
Data Scientist Rome, Italy

- Build statistical and machine learning models, including deep neural networks for time-series prediction and unsupervised anomaly detection, to identify patterns and signals within large, complex behavioural datasets.
- Conduct exploratory data analysis and research initiatives to identify novel modelling approaches, collaborating with engineering teams to validate and refine detection methods.
- Communicate technical findings and model outputs to both technical and non-technical stakeholders, translating complex analysis into clear, actionable recommendations.
- Collect and structure large volumes of log data from multiple sources into analysis-ready datasets, using Databricks and PySpark.

PROJECTS

Loan Default Scoring Service

- End-to-end PD model on Lending Club data (scikit-learn), served as a Dockerized API. (github.com/mimmospoto/loan-default-scoring)

EDUCATION

Sapienza University of Rome 09/2020 – 10/2023
M.Sc. in Data Science (GPA: 29,2/30) (Final grade: 110/110 with honors) Rome, Italy

Nova School of Business and Economics 09/2016 – 02/2018
M.Sc. International Master's in Finance (#7th FT World Ranking) (GPA: 17/20) Lisbon, Portugal

Bocconi University 09/2013 – 07/2016
B.Sc. Management and Economics (GPA: 26/30) Milan, Italy

SKILLS

Programming	Python, R, Matlab, SQL
AI & ML	Scikit-learn, Pandas, NumPy, PySpark, PyTorch, TensorFlow, Polars, Azure ML Studio
DevOps/MLOps	Git, Docker, MLflow, FastAPI
Cloud	Microsoft Azure, Databricks
Languages	Italian, English, Spanish (DELE B2), Portuguese
Interests	Blockchain technologies, basketball, reading, tutoring, karate
